Sequence 18072, Application US/09248796A

Patent No. 6747137
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANS
TITLE OF INVENTION: NUMBER: US/09/248,796A
FILE REFERENCE: 107196.132
CURRENT FILING DATE: 1999-02-13
PRIOR PAPLICATION NUMBER: US 60/074,725
PRIOR PAPLICATION NUMBER: US 60/096,409
PRIOR FILING DATE: 1998-08-13
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 18072
LENGTH: 342
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENERAL INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 29214, Application US/09252991A

Sequence 29214, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: ACCEST AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

PTILE REPRENCE: 107196.136

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1998-02-18

PRIOR PILING DATE: 1998-07-27

PRIOR PILING DATE: 1998-07-27

SEQ ID NO 29214

LENGTH: 167
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Sequence 2, Application US/09515311

Patent No. 6582701

GENERAL INFORMATION:

APPLICANT: Weber, Exic R.

APPLICANT: MCCAll, Catherine A.

TITLE OF INVENTION: NOVEL EQUINE FC EPSILON RECEPTOR ALPHA

TITLE OF INVENTION: CHAIN NUCLEIC ACID MOLECULES, PROFEINS AND USES THEREOF

NUMBER OF SEQUENCES: 12

CORRESPONDENCE ADDRESS:
                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                   Gaps

Sequence 2035, Application US/09252991A

Sequence 20318, Application US/09252991A

Patent NO. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR RELIGATION NUMBER: US 60/074,788

PRIOR RELIGATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

Sequence 30838, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: MAKE J. Rubenfield et al.
APPLICANT: MAKE J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT FILING DATE: 1999-02-18

PRIOR PELICATION NUMBER: US 60/074,788

PRIOR PELICATION NUMBER: US 60/074,788

PRIOR PELICATION NUMBER: US 60/094,190

PRIOR PILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 30838

LENGTH: 980
                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                          Gaps

"Lipid phosphate phospbatases dimerise, but this interaction is not required for in vivo activity.";

BMC Blochem. 5:2-2(2004).

-!- FUNCTION: Catalyzes the conversion of phosphatidic acid (PA) to diacylglycerol [05]. In addition it hydrolyzes lysophosphatidic acid (LPA), ceramide-1-phosphate (C-1-P) and sphingosine-1-phosphate (S-1-P). The relative catalytic efficiency is LPA = PA > C-1-P > S-1-P. May be involved in cell adhesion and in cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     substrate recognition, it may confer only structural or functional

Development 130:4623-4637(2003).

-!- FUNCTION: Catalyzes the conversion of phosphatidic acid (PA) to diacylglycerol (DG). In addition it hydrolyzes lysophosphatidic acid (LDA), ceramide-1-phosphate (C-1-9) and sphingosphate. phosphate (S-1-P) (By similarity). Essential to the formation of the chorio-allantoic placenta and extra-embryonic vasculature. Also mediates gastrulation and axis formation, probably by regulating the Mat signaling pathway.

-!- CATALYTIC ACTIVITY: A 3-sn-phosphatidate + H(2)O = a 1,2-diacyl-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "The lipid phosphatase LPP3 regulates extra-embryonic vasculogenesis

```

SUBUNIT: Homodimer (By similarity).

SUBCELLULAR LOCATION: Integral membrane protein. Endoplasmic reticulum associated (By similarity).

DISFASE: Papa2b deficient embryos fail to form a chorio-allantoic placents and yolk sac vasculature. A subset of embryos also show a shortening of the anterior-posterior axis and frequent duplication

sn-glycerol + phosphate.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       29-MAR-2004 (Rel. 43, Last sequence update)
05-JUL-2004 (Rel. 44, Last annotation update)
1. Lipid phosphate phosphohydrolase 3 (EC 3.1.3.4) (Phosphatidic acid
phosphatease 2b) (Phosphatidate phosphohydrolase type 2b) (PAP2b) (PAP-2b) (PAP2-beta) (Differentially expressed in rat intestine 42)
of axial structures. Loss of Ppap2b results in a marked increase in beta-catenin-mediated T-cell factor (TCF) transcription.
-!- SIMILARITY: Belongs to the PA-phosphatase related phosphoesterase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rattus norvėgicus (Rat).

-!- PTM: N-glycosylated.
-!- SIMILARITY: Belongs to the PA-phosphatase related phosphoesterase
                                                                                                                                                                                                                               Puncipulation (281:L1484-L1493(2001).

-1- FUNCTION: Catalyzes the conversion of phosphatidic acid (PA) to diacylglycerol (DG). In addition it hydrolyzes lysophosphatidic acid (LPA), ceramide-1-phosphate (C-1-P) and sphingosine-1-phosphate (S-1-P) (By similarity). Involved in the regulation of epithelial differentiation.

-1- CATALYTIC ACTIVITY: A 3-sn-phosphatidate + H(2)O = a 1,2-diacyl-sn-glycerol + phosphate.

-1- SUBUNIT: Homodimer (By similarity).

-1- SUBCELDULAR LOCATION: Integral membrane protein. Endoplasmic reticulum associated.
                                                                                                                                                                                                                                                                                                                                                                -!- TISSUE SPECIFICITY: Detected in epithelial cells of intestinal mucosa, lung, liver and brain.
-!- DEVELOPMENTAL STAGE: Expression is increased during epithelial differentiation in intestinal mucosa as well as in kidney, liver
                                                                                                  Barila D., Murgia C., Nobili F., Gaetani S., Perozzi G.; "Subtractive hybridization cloning of novel genes differentially expressed during intestinal development."; Eur. J. Biochem. 22:701-709(1994).

Almost undetectable in brain, heart, bone, muscle or spleen.
-i-INDUCTION: Moderately, by hydrogen peroxide, calcium ionophore and dexamethasone.
                                                                                                                                                                                                                                                                                                                                   -I. PTM: N-glycosylated. Contains high-mannose oligosaccharide.
-I. MSCELLANBOUS: Overexpression elicited a number of phenotypic alteration without affecting several aspects of LPA signaling. Phenotypic abnormalities affect primarily three organs: the liver, the skin, and the reproductive organs. There is a reduction on body size, birth weight, abnormalities in fur growth, and a severely impaired spermatogenesis.
-I. SIMILARITY: Belongs to the PA-phosphatase related phosphoesterase
 sphingosine-1-phosphate (S-1-P). The relative catalytic efficiency
                                                  sn-glycerol + phosphate.
SUBUNIT: Homodimer. This complex seems not to be involved in
substrate recognition, it may confer only structural or functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    R PIR; $66668; $6668.

-I- FUNCTION: Broad-specificity phosphohydrolase that dephosphorylates exogenous bioactive glycerolipids and sphingolipids. Catalyzes the conversion of phosphatidic acid (PpA), c diacylglycerol (DG). In addition it hydrolyzes lysophosphatidic acid (LPA), ceramide-1-phosphate (C-1-P) and sphingosine-1-phosphate (S-1-P) (By
N-linked (GlcNAc. . .) (Potential).

Tubid chosphate phosphateses regulate lysophosphatidic acid

Thibitors of lipid phosphate phosphatase activity.";

Thibitors of lipid phosphate phosphatase activity.";

Thibitors of lipid phosphatidic acid (PA) to diacyllayles the conversion of phosphatidic acid (PA) to diacyllayles the conversion of phosphatidic acid (PA) to diacyllayles the cardiovascular system. Major enzyme responsible of dephosphatidic acid (LPA) signaling in the cardiovascular system. Major enzyme responsible of dephosphatidic diacyllating LPA and postiolized, LPA in plateletes, which terminates signaling actions of LPA. May control circulating rom platelet activation. It has little activity towards ceramide-1-phosphate (C-1-P) and sphingosine-1-phosphate (S-1-P). The relative catalytic efficency is LPA > PA > S-1-P > C-1-P. It's down-regulation may contribute to the development of colon adenocarcinoma.

C -- GYALMYTIC ACTIVITY: A 3-sn-phosphatidate + H(2)O = a 1,2-diacyl-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- TISSUE SPECIFICITY: Ubiquitous Iy expressed with highest expression
